PROFESSIONAL SUMMARY

QA Engineer with 3.6 years of experience in Manual Testing, specializing in Functional, Regression, Integration, System, UAT, and End-to-End Testing. Experienced in payment workflows, transaction validation, business process testing, SQL/database validation, defect management, and release testing. Strong knowledge of STLC, SDLC, Agile Scrum, JIRA, SQL, API validation, and backend data verification, with experience collaborating with Business Analysts, Developers, Product Owners, and stakeholders.

CORE SKILLS

Software Testing: Manual Testing, Functional Testing, Regression Testing, Integration Testing, System Testing, Smoke Testing, Sanity Testing, End-to-End Testing, UAT

Data Testing: Data Validation, Data Migration Testing, ETL Testing, Data Reconciliation, Source-to-Target Validation, Data Integrity Testing, Backend Testing

Automation Testing: Selenium WebDriver, Java, TestNG, Automation Testing, Regression Automation

API & Backend Validation: SQL, Oracle SQL, PostgreSQL, Database Validation, Backend Validation

Data & Analytics: Power BI Testing, Data Visualization, Data Catalog, Data Governance, Data Security, Data Lineage, Metadata Management, Data Analytics

GenAI: GenAI-Assisted Testing, Prompt Engineering, Prompt-Based Data Extraction, AI Workflow Validation

Cloud & Data Platforms: Azure Data Lake Storage Gen2, Azure Databricks, Hive, Impala

Tools: Jira, GitHub, WinSCP, SharePoint, Amazon WorkSpaces

Methodologies: Agile Scrum, SDLC, STLC, UAT, Release Management

PROFESSIONAL EXPERIENCE

QUALITY ASSURANCE ENGINEER – DATAZENSE

ChainSys Software Exports Pvt. Ltd. | November 2022 – May 2026

- Performed end-to-end Software Testing for enterprise Data Governance, Data Catalog, Data Visualization, Data Security, Analytics, Metadata Management, and Compliance applications.
- Analyzed business requirements and created test scenarios, test cases, test data, and test execution plans.
- Executed Functional, Regression, Integration, System, Smoke, Sanity, End-to-End, and UAT testing across multiple product releases.
- Tested Data Visualization and Power BI reporting capabilities, validating dashboards, reports, KPIs, filters, drill-downs, charts, data refresh, and visualization accuracy.
- Performed source-to-target data validation across source systems, Azure Data Lake Gen2, Databricks, and reporting/visualization layers.
- Tested Data Catalog and Metadata Management functionality including metadata ingestion, data discovery, advanced search, data lineage, business glossary, and data quality workflows.
- Performed GenAI and prompt-based workflow testing, validating generated outputs, extracted information, response accuracy, data consistency, and expected business results.
- Tested Data Security and Data Governance functionality including role-based access control (RBAC), user permissions, authorization, data access restrictions, governance rules, PII masking, and compliance requirements.
- Validated GDPR and CCPA-related requirements and verified PII data masking and protection mechanisms.
- Performed Data Migration Testing by validating source-to-target data, field mapping, transformation logic, data completeness, accuracy, and reconciliation.
- Validated end-to-end migration flows and workflow automation across integrated enterprise applications.

- Executed SQL queries for backend validation, data integrity testing, ETL validation, migration validation, and source-to-target reconciliation.
- Designed positive, negative, boundary, integration, and regression test scenarios based on functional and business requirements.
- Managed the complete Defect Life Cycle, including defect identification, logging, prioritization, tracking, retesting, verification, and closure.
- Collaborated with Product Owners, Business Analysts, Developers, and Business Stakeholders for requirement clarification, defect resolution, UAT, and release activities.
- Participated in Agile Scrum ceremonies, including Sprint Planning, Daily Stand-ups, Sprint Reviews, Retrospectives, and Backlog Grooming.
- Supported release validation, production verification, post-deployment validation, and production smoke testing.
- Developed and executed regression automation scenarios using Selenium WebDriver, Java, and TestNG.
- Used GitHub for test automation source-code management and collaboration.

PROJECT EXPERIENCE

DataZense – Enterprise Data Management & Analytics Platform

Role: QA / Test Engineer

DataZense is an enterprise data platform providing **Data Visualization, Data Catalog, Data Security, Data Governance, Data Migration, Analytics, and Workflow Automation capabilities.**

Responsibilities

- Performed end-to-end testing across DataZense enterprise data workflows and applications.
- Validated **Power BI-style dashboards, reports, KPIs, filters, drill-downs, charts, and analytical visualizations.**
- Verified data accuracy between source systems, databases, Azure Data Lake Gen2, Databricks, and visualization layers.
- Tested **Data Catalog** features including metadata ingestion, data discovery, search, data lineage, business glossary, and metadata validation.
- Validated **multi-file extraction workflows** and verified extracted data against expected source information.
- Tested GenAI-assisted workflows using structured prompts for data extraction, analysis, validation, and workflow automation.
- Performed Data Security and Data Governance testing covering RBAC, authorization, permissions, data access, PII masking, and governance controls.
- Performed Data Migration Testing and source-to-target validation using SQL.
- Validated migration flow, field mapping, transformation logic, data completeness, and data reconciliation.
- Tested workflow automation including workflow initiation, processing, status tracking, error handling, and successful completion.
- Executed functional, regression, integration, UAT, data validation, and release testing.

Power BI Testing & Data Validation

- Validated **Power BI dashboards, reports, KPIs, charts, filters, drill-downs, and analytical visualizations.**
- Verified report data against business requirements and source data.
- Performed SQL-based backend data validation.
- Validated data flow across **Source Systems → Azure Data Lake Gen2 → Databricks → Power BI.**
- Verified data accuracy, completeness, consistency, refresh results, and report calculations.
- Supported UAT and collaborated with business stakeholders for reporting validation.

Kroll – Data Governance Platform

Role: Product Quality Assurance Engineer

- Tested Data Governance, Data Catalog, Data Lineage, Data Quality, and compliance workflows. Performed Functional, Regression, Integration, and UAT testing.

DGE – Data Governance Enablement

- Tested metadata ingestion, data discovery, cataloging, search, and data lineage workflows. Supported UAT, defect validation, and release testing.

KOSH - Enterprise Data Platform

- Performed Functional, Regression, Integration, and UAT testing across enterprise data management and analytics modules. Validated business workflows and data accuracy.

MSRTC - Business Application

- Performed end-to-end testing of business workflows, UAT, regression, and production validation. Managed defects and supported release testing.

KEY RESPONSIBILITIES

- Analyze business requirements, functional specifications, and user stories to identify test scenarios and coverage.
- Design and execute test scenarios, test cases, test data, and test execution reports.
- Perform Functional, Regression, Integration, System, Smoke, and End-to-End Testing.
- Validate banking transactions, payment flows, and business workflows.
- Perform API testing and database validation using appropriate tools and SQL queries.
- Validate data flow across front-end applications, middleware, and backend systems.
- Identify, document, track, retest, and close defects using JIRA, ALM, or similar defect management tools.
- Participate in requirement clarification, defect triage, and root-cause analysis discussions.
- Collaborate with Business Analysts, Developers, Product Owners, and QA teams to resolve defects and clarify requirements.
- Support UAT, customer demonstrations, production validation, and release testing.
- Prepare test status, test completion, defect, and release reports and communicate risks and issues to stakeholders.
- Ensure testing activities are completed within defined project timelines and quality standards.

EDUCATION

Bachelor of Engineering – Computer Science and Engineering
Muthayammal Engineering College, Rasipuram, Tamil Nadu

2016-2020
